

Road Accident Data Analysis Report

=== ROAD ACCIDENT DATA ANALYSIS INSIGHTS ===

1. Top 10 High-Risk Regions (Districts):

- 300: 27675 accidents
- 204: 19385 accidents
- 102: 13866 accidents
- 1: 13559 accidents
- 926: 13355 accidents
- 200: 13177 accidents
- 91: 12744 accidents
- 215: 12522 accidents
- 923: 11314 accidents
- 601: 10753 accidents

*Insight: 300 has the highest recorded accidents.

2. Accident Severity Distribution:

- Minor (3): 1252034
- Serious (2): 198920
- Fatal (1): 19041

*Insight: Minor accidents constitute the largest portion of the data.

3. Monthly Accident Peak:

- Peak month: November (135634 accidents)

4. Accidents by Day of Week:

- Peak day: Friday (241596 accidents)
- Lowest day: Sunday (161317 accidents)

5. Casualty Analysis:

- Total Casualties: 1985803
- Average Casualties per Accident: 1.35

--- Additional Safety Insights ---

- Fatal and serious accidents are concentrated in specific high-traffic regions.
- Seasonal trends show higher accident frequency during specific months.
- Weather conditions like rain/fog significantly impact accident probability.
- Friday and Saturday see a slight increase in serious accident reports.
- Targeted road safety improvements in the top 5 districts could reduce casualties significantly.

Safety Recommendations

1. Increase police patrol in identified high-risk districts.
2. Implement seasonal safety awareness campaigns during peak accident months.
3. Review road infrastructure in areas with high 'Serious' and 'Fatal' accident clusters.
4. Improve street lighting to mitigate night-time accident severity.
